Abstract (en)

[origin: US2018134363A1] A device for predetermining the driving stage of an electric motor of a boat is disclosed. A base plate is connected to a side wall of the boat and to a control lever, which is pivotable relative to the base plate about a pivot axis. The control lever is in turn coupled to a speed controller for controlling the motor. The control lever forms a substantially closed contour with a plane formed by the base plate.
