Abstract (en)
A load cell adapted to measure the tension in a supporting cable of a lifting device, said load cell (11) comprising a first body (12) that is in mechanical contact with a support structure of the lifting device; a second body (13) that is in mechanical contact with support means of the lifting device; joining means of the male-female ball-and-socket joint type, which mechanically couple one end of the first body (12) to the corresponding end of the second body (13); and means for measuring the deformation exerted by the second body (13) of the cell (11) on the first body (12) when the load cell (11) is subjected to compressive stresses.
