Abstract (en)
[origin: EP3321398A1] A spinning machine 1 includes: a plurality of spinning units 2 each including an air-jet spinning device 7 and a winding device 13; an air pipe 62; a feeding device 70 configured to feed an additive to the air pipe 62; and a control device 100 configured to control operation of the feeding device 70. When the operating number of the air-jet spinning devices 7 is smaller than a predetermined number, the control device 100 controls the feeding device 70 such that the additive is fed by intermittent control, thereby increasing the amount of the additive to be fed as the operating number increases or reducing the amount of the additive to be fed as the operating number decreases. When the operating number is equal to or greater than the predetermined number, the control device 100 controls the feeding device 70 such that a certain amount of the additive is continuously fed.
