Abstract (en)

An overflow device (2) for a flushing tank for sanitary appliances, comprises an overflow tube (15), extending along an axis (A) between a top end (16), open for communicating in use with the inside of the flushing tank in which the device is installed, and a lower end (17), connectable to a drain hole of the flushing tank; the tube (15) comprises a narrowing (20), positioned in an intermediate position between the ends (16, 17) of the tube (15) and between an upper tube portion (21) and a lower tube portion (22), the narrowing (20) having an internal cross-section smaller than the internal cross-section of at least one of the upper tube portion (21) and the lower tube portions (22).
