Abstract (en)

[origin: WO2017009156A1] The invention relates to a method for observing emission limits in a combustion process, in which at least one fuel (1) or at least one fuel mixture is used, said fuel or fuel mixture being supplied to at least one combustion zone via a supply path. The fuel (1) or fuel mixture undergoes at least one first chemical analysis as it is being conveyed to the combustion zone, wherein the values detected during said first chemical analysis are used to control the combustion process.
