Abstract (en)

[origin: WO2017009721A1] A lever actuator for controlling electrical devices comprises an anchoring body (2) for the anchorage to the panel or box of the device defining a central axis (X) and provided with drive means (5) adapted to engage the switching means of the electrical device, a control lever (7) having a lower end (8) pivoted on the anchoring body (2) to rotate around a fulcrum point (9) and selectively engage the drive means (5), a flexible sheath (10) for covering the lever (7) fixed to the anchoring body (2) by sealing means (3, 13), locking means (19) of the lever (7), unlocking means (26) comprising a releasing element (27) movable on the lever (7) between a locking position of the lever (7) wherein it engages the locking means (19) and an unlocking position wherein it is free therefrom to disengage the lever (7) from the locking means (19) and allow the rotation thereof. The flexible sheath (10) is a unitary body which entirely covers the lever (7) and the release element (27) seamlessly. The unlocking means (26) comprise a gripping element (28) coupled to the releasing element (27) with the interposition of the sheath (10) to allow gripping of the unlocking means (26) by a user adapted to promote the movement of the releasing element (27) from the locking position to the unlocking position.
