Abstract (en)  
[origin: WO2017009008A1] A base strip (1) for connection to at least one plug connector part (3) comprises a housing (10) which has a wall section (102) and forms at least one plug-in location (12) into which the at least one plug connector part (3) can be inserted, at least one contact element (11), which is arranged on the wall section (102) of the housing (10), for electrical contact to be made by the plug connector part (3), and at least one dome (13) which is arranged on the wall section (102) and protrudes from the wall section and has an opening (134) through which the at least one contact element (11) extends along an insertion direction (E) and in which the contact element (11) is held. It is provided here that the dome (13) has two sections (130, 131) which are spaced apart from one another transverse to the insertion direction (E) and are separated from one another by a slot (132, 133). A base strip which allows each contact element to be fixedly held on the associated wall section of the base strip is provided in this way.
