Abstract (en)  
[origin: EP3323952A1] A multichamber gas-filled insulated glass unit (10), comprising: an outer pane (1) having a solar direct transmittance  $\tilde{A}_{e,outer}$  and a solar direct absorptance  $\pm e_{outer}$ , an inner pane (2), at least three chambers (3, 3.1) divided by intermediate panes (4, 4.1), wherein the two intermediate panes (4) closest to said outer pane (1) have an average value  $av(\pm e_{inter})$  of the solar direct absorptance  $\pm e_{inter}$ , wherein said chambers (3) comprise a group of sealed chambers (3) filled with an insulating gas having a thermal conductivity of  $\kappa$ , wherein the values for  $\tilde{A}_{e,outer}$ ,  $\pm e_{outer}$ ,  $av(\pm e_{inter})$  and the total number N of outer, inner and intermediate panes (1, 2, 4, 4.1) are chosen such that a parameter T, which is defined as:  $T = 106 \# \pm e_{outer} 0.07 \# \tilde{A}_{e,outer} 0.32 \# av \pm e_{inter} 0.32 \# N 1 + \kappa \# \kappa \# \kappa \# \kappa \# 0.4 0.466$  obeys  $T < 95$ , preferably  $T < 90$ , and more preferably  $T < 85$ , and most preferably  $T < 80$ .
