Abstract (en)
[origin: WO2017013215A1] The invention relates to a seat fitting for seating furniture (1), comprising a base frame (21), a sliding frame (22) which is arranged in a movable manner relative to the base frame (21), and at least one linear drive (6, 62, 63, 64) which acts on a paired drive shaft (5, 51, 52, 53) in order to move a component or an assembly of the seat fitting (3), such as a foot part (41), a backrest part (42), or a stand-up aid (43), back and forth between an extended position and a retracted position relative to the base frame (21) and/or the sliding frame (22). The aim of the invention is to allow a variable design and a retroactively simple adaptation on demand. This is achieved in that the base frame (21), the sliding frame (22), the drive shaft (5), and the linear drive (6) form a functional base unit (2) which can be assembled in a modular manner so as to form a complete seat fitting (3) with a foot part (41), a backrest part (42), a stand-up aid (43), and/or a seat frame (44) provided for the sliding frame (22).
