Abstract (en)

[origin: WO2017017365A1] The invention relates to a vacuum cleaner including: a vacuum cleaner body (10) including means for vacuuming (11) and a handling interface (12) for a user, a brush head (20) arranged to be in contact with a floor to be cleaned and hinged relative to the vacuum cleaner body (10), an air circuit between the means for vacuuming (11) and the brush head (20) and including a first deformable air channel having a first end connected to the brush head (20). The invention is characterized in that the stick vacuum cleaner includes at least one ball-joint part mounted in ball-joint connection relative to the vacuum cleaner body (10) and on which part is carried a second end of the first deformable air channel, and in that the air circuit includes at least a second deformable air channel, at least partially housed within the ball-joint part, and connecting said carried second end to a portion of the air circuit of the vacuum cleaner body (10).
