Abstract (en)
[origin: WO2017013040A1] The invention relates to an apparatus for producing self-adhesive labels, in particular in a self-service area of a drug store for example. The apparatus comprises a thermal sublimation printer as a printing device (11) for printing a printed pattern onto the adhesive film and a cutting device (13) for cutting the adhesive film along a cutting pattern, wherein the adhesive film is moved from the printing device (11) to the cutting device (13) automatically. Initially, only a first moving unit (16) of the printing device (11) moves the adhesive film at a first speed to a second moving unit (18) of the cutting device (13), after which both moving units (16, 18) move the printed adhesive film further in the forward direction.
