Abstract (en)

[origin: WO2017005575A1] The present invention relates to a method for operating a lift system (1) having a shaft system (2) and a plurality of lift cars (3) that are moved between floors (4) separately from one another in circulating operation such that the lift cars (3) are moved upwards in a first shaft (5) and are moved downwards in a second shaft (6). In this case, at least a number of shaft positions (7) that can each be approached by the lift cars (3) is defined that corresponds to the number of lift cars (3), with synchronisation of the movement of the lift cars (3) being performed in respect of these defined shaft positions (7). Furthermore, the present invention relates to a lift system (1) having a shaft system (2), a plurality of lift cars (3) that are movable in the shaft system (2) and a control device for operating the lift system (1), wherein the control device is set up to operate the lift system (1) in accordance with a method according to the invention.
