Abstract (en)

[origin: CA2990528A1] The invention relates to a scaffolding (10) comprising a coupling (18) which can be mounted at a connection point (12). The connection point (12) also has preferably a recess (32, 34) in the form of a through-opening, into which an angular section (30) of the coupling (18) can be at least partially inserted. The angular section (30) engages behind the connection point (12) preferably at least in sections. The coupling (18) can have a half-coupling (22), such that a simple connection to a scaffolding tube, in particular for connection to a facade, is produced. The invention also relates to a method for connecting the scaffolding (10) to a coupling (18) of this type.
