Abstract (en)
The present invention relates to a closure system (1) for bottles containing lyophilized or liquid products, particularly injectable or perfusable pharmaceutical products, comprising: - a perforable closure body (3) adapted to close the mouth (5) of a bottle (7); - an inner capsule (9), able to be fitted onto the neck (11) of the bottle (7), configured to hold the closure body (3) in a sealed closure configuration of the mouth (5) of the bottle (7), in which the inner capsule (9) comprises an opening (13) adapted for allowing access to the closure body (3); - an outer capsule (15), able to be fitted onto the inner capsule (9). The peculiarity of the invention consists in the fact that the outer capsule (15) is made in a single body and comprises an upper disc-shaped portion (17) configured to close the opening (13) of the inner capsule (9) and a lower portion (19) able to be fitted around the inner capsule (9), in which the outer capsule (15) comprises a breaking line (21) between the upper disc-shaped portion (17) and the lower portion (19) .
