Abstract (en)
[origin: EP3326936A1] Provided is a package of a rod-like tobacco article in which a not yet smoked rod-like tobacco article is less likely to be smeared when a smoked rod-like tobacco article is returned to the package of a rod-like tobacco article. A package of a rod-like tobacco article of the present invention includes: a storage unit that stores therein a rod-like tobacco article; and a horizontal partition unit that partitions the storage unit in a horizontal direction perpendicular to a depth direction of the storage unit to suppress flying of the ash of a smoked tobacco article. The horizontal partition unit includes a horizontal partition unit-hole that allows a single rod-like tobacco article to penetrate therethrough.
