Abstract (en)

[origin: EP3327181A1] An object to be solved by the present invention is in that a spinning die 1 for producing ultrafine fiber nonwoven fabric is made miniaturized and its productivity thereof is enhanced. The spinning die 1 has a substantial cuboid shape and a plurality of nozzle holes 2 is disposed in a longitudinal direction. And a slit for jetting hot air is disposed only in one side of the nozzle holes 2. Thermoplastic polymer is melt blown from the nozzle 2 of the spinning die 1 to obtain ultrafine fibers. Hot air is jetted from the slit 4 disposed at only one side of the nozzle holes 2. The result is that the ultrafine fibers melt blown in a direction inclined with respect to an axis direction of the nozzle. The blown ultrafine fibers are accumulated by sucking to downward to obtain ultrafine fiber nonwoven fabric.
