Abstract (en)

[origin: EP3327234A1] A sliding door or window assembly (1) comprising: a frame (2) having a bottom sill (2c), a first fixed panel (3) and a second fixed panel (4), a first sliding panel (5) and a second sliding panel (6), said first and second sliding panels (5,6) each being displaceable between an open position and a closed position, said first and second sliding panel (5,6) arranged such that outer surfaces of said first and second sliding panels are arranged essentially co-planar with the outer surfaces of the first and the second fixed panel (3,4) when the first and second sliding panels (5,6) are in their closed positions, a vertically arranged mullion bar (10) arranged between the first and second sliding panels, and being connected to the second sliding panel such that when the second sliding panel displaces to its open position, the mullion bar follows the second sliding panel. The assembly further comprises a mullion bar displacement mechanism (52,56,62,76) connecting the mullion bar (10) and the second sliding panel (6), said mullion bar displacement mechanism (52,56,62,76) being arranged such that at least a portion of the mullion bar (10) is displaceable with respect to the second sliding panel (6).
