Abstract (en)  
An engine control method, including: determining an intention of a driver for acceleration during vehicle (1) traveling; stopping fuel supply to an engine (2) when it is determined that the driver does not have the intention for acceleration; permitting restart of the engine (2) when it is determined that the driver has the intention for acceleration after stopping the fuel supply to the engine (2); prohibiting the restart of the engine (2) until an engine rotational speed (Re) drops to or below a predetermined rotational speed threshold (Tr), even when the restart of the engine (2) is permitted; and restarting the engine (2) after the engine rotational speed (Re) drops to or below the predetermined rotational speed threshold (Tr) .
