Abstract (en)

The present disclosure relates to a method performed by a communication device 1 communicatively connected to a headphone 2. The method comprises outputting a first audio stream to the headphone for playback to a user 3 of the communication device. The method also comprises, via an interface 4 and/or 5 of the communication device to its surroundings, obtaining an indication that the playback of the first audio stream should be altered. The method also comprises, in response to the obtained indication: altering the output of the first audio stream; by means of a microphone 5 of the communication device, recording a second audio stream; and outputting the second audio stream to the headphone for playback to the user.
