Abstract (en)

[origin: WO2017021620A1] The invention relates to a one-piece applicator device for applying a fluid or pasty product to keratin fibres, comprising a core (1) that extends along a longitudinal axis XX and at least one flexible stem (2) that is embedded at at least a first and a second point along the longitudinal core, said stem extending substantially along the longitudinal axis XX, spikes being provided on the core and/or on said at least one stem. According to the invention the core (1) is provided with at least one through-opening (4) and said at least one flexible stem (2) extends substantially in a radial plane and has at least a first and a second curve along its length, such that said stem crosses said at least one opening (4) without contact in order to ensure mobility in a radial plane of the device.
