Abstract (en)
[origin: WO2017017443A1] The present application relates to apparatus for performing fracture reduction, the apparatus comprising: a first manipulator (200) for performing distraction of a bone section the fracture; a second manipulator (400) for manipulating a first bone fragment of the fracture; wherein the second manipulator (400) is mounted on a moveable platform (300) having multiple degrees of freedom and is configured to manipulate the first bone fragment by means of a percutaneous attachment device (502) attached to the first bone fragment, and wherein the first manipulator (200) comprises a limb support (202) configured for removable attachment to the limb such that distraction of the bone section can be performed without any attachment of the first manipulator (200) to the bone section.
