Abstract (en)
[origin: WO2017020939A1] The invention relates to a power trainer device (10) having a device frame (9), a first actuating element (1), and a second actuating element (2), a force transmitter (3), connecting the first and the second actuating element (1, 2) and having a flexible section (3'), which is displaceably guided over a deflection roller (4) and the limbs of which are each operatively connected to one of the actuating elements (1, 2) with respect to the force flow, a spring element (5), connected in a force-transmitting manner between the shaft of the deflection roller (4) and the device frame (9), a lever mechanism (6) and a pointer element (7), wherein the lever mechanism (6) transforms a displacement of the shaft of the deflection roller (4) into a deflection of the pointer element (7).
