Abstract (en)

[origin: WO2017017225A1] The current invention concerns an automated method to produce wall coverings, preferably flexible wall coverings and more preferably wallpaper, which method comprises the steps of providing a substrate layer which is essentially endless along a longitudinal dimension and which substrate layer has a top side and a back side, providing a thermoplastic material coating on the top side of said substrate layer, providing said coating with an embossed pattern and providing a print pattern directly on top of the embossed coating using a digital printing device, whereby the depth of the embossed pattern provided in the coating comprises a maximum value of about 1.0 mm.
