Abstract (en)
[origin: WO2017017125A1] The invention relates to a wet-friction material comprising a planar carbon fiber-reinforced composite material containing at least one textile fabric made of carbon fibers embedded in a plastic matrix, characterized in that at least some areas of the wet-friction surface of the carbon fiber-reinforced composite material are carbonized from the surface to a defined depth. The invention also relates to a method for producing said wet-friction material.
