Abstract (en)
[origin: WO2017019786A1] Construction systems and methods of the invention provide building constructions systems which may be assembled, such as for example, by stacking and interconnecting standardized modular blocks between standardized modular posts. The modular posts may be comprised of a sleeve of WPC or other composite material surrounding a reinforced concrete core. The blocks, posts and other components in accordance with the principles of the invention may have a variety of geometries and features. These components may together form the basis of a modular, standardized method and system of constructing dwellings or other buildings.
