Abstract (en)
[origin: WO2017017346A1] The invention relates to a driving wheel (200) for a marine-type chain (160), the links of which have a diameter cross-section of between 8 and 20 millimetres, for use in the agricultural domain, said wheel comprising a main cylindrical groove between two lateral flanges (220) and a plurality of regularly interspaced forks (249) which project radially from said groove, defining housings (250) for receiving every other link of said substantially flat chain. According to the invention, said flanges extend beyond the groove at a height which is substantially equal to the width of a link of the chain.
