Abstract (en)
[origin: WO2017020879A1] The invention relates to a system for monitoring and influencing at least one object of interest and/or processes carried out by the object, containing: at least one object for obtaining information, which is designed to obtain information on the object of interest; at least one influencing object which is designed to exert influence on the object of interest, the object for obtaining information and the influencing object being subject to a geo-referencing process. The system also comprises a central control unit which is coupled to the object for obtaining information and the influencing object, controls an exchange of information with or between the object for obtaining information and the influencing object, requests information from the object for obtaining information in response to an alarm trigger, and on the basis of information from the object for obtaining information causes the influencing object to carry out measures for influencing the object of interest and/or processes carried out by the object; and a communication network via which the exchange of information between the objects or between the objects and the central control unit is carried out.
