Abstract (en)
[origin: EP3329799A1] A cosmetic applicator includes a dispensing member (10) including a space, perforations (16) on one surface, an opening (12) on the other opposite surface, and an externally extending rim (11) formed around the opening (12); a sponge (18) in the space; a central shaft seat (20) including an annular base (26) in the opening (12), an annular lip (24) formed on the base and supported by the rim, and a hollow cylinder having an axial channel (221, 201); first (31) and second half housings (32) each including a curved trough (36) adjacent to a bottom; a check valve (40) in the channel (221, 201); and a cap (50) including a hollow stem (52) partially disposed in the channel (221, 201). The lip is fastened in the troughs of the first and second half housings. The first (31) and second half housings (32) are complementarily secured together. The central shaft seat (20) is fastened in the first (31) and second half housings (32).
