Abstract (en)

[origin: EP3330417A1] A control leverage mechanism of a travelling-head (T) tuck-in device for a weaving loom characterized in that it comprises a first articulated quadrilateral (Q1), whose end hinges (1, 2) are fixed to the loom, which takes the alternate movement from the loom sley (S) and transfers said alternate movement, suitably modulated, to a terminal lever (L2) hinged to one of said end hinges (2), said terminal lever (L2) integrally carrying said travelling-head (T) of the tuck-in device.
