Abstract (en)

A tension cord mounting for an architectural covering including a base configured to be engaged to an outside edge of an architectural structure and a cord holder for engaging one or more cords. The base and cord holder are configured to cooperate with each other to engage the cord holder to the base. The cord holder includes an inner surface configured to face the base, an opposite outer surface, and a side edge extending between the inner surface and the outer surface. The cord holder defines at least one cord opening between the inner surface and the outer surface, the cord opening being configured to guide a cord from the inner surface to the outer surface. The cord holder defines at least one respective pathway between the inner and outer surfaces, the pathway extending from the side edge to the at least one cord opening.
