Abstract (en)
[origin: EP3330720A1] The present disclosure relates to a system for charge-discharge cyclers, particularly to a system for charge-discharge cyclers in which a structure of a shunt is improved to improve performance/accuracy of a current control as a key component of an instrument for testing a secondary battery charge-discharge. The present invention as described above has the effect of improving the degree of precision/performance of the current control during a charge/discharge inspection of the secondary battery, thereby raising the standard of development/aspect of the secondary battery and developing a charge/discharge performance tester of high performance.
