Abstract (en)

[origin: WO2017021486A1] The invention relates to a method for producing a plant substrate for cultivating plants, which includes the steps of: collecting organic waste suited to the plants to be cultivated; mixing said waste in order to obtain a homogeneous material and to reduce the microbial activity thereof; incinerating the organic waste suited to the plants to be cultivated in order to obtain ashes which are sources of minerals suitable for cultivating said plants; incubating the homogeneous material with the ashes in order to restart the microbial activity; initiating the mineralisation of the material; and obtaining a cultivation substrate that is ready to use.
