Abstract (en)

[origin: WO2017055008A1] The invention relates to a rail vehicle with a fresh water connection (1) and a waste water connection (2), wherein a flap (4) is arranged in front of the fresh water connection (1) in such a manner that said flap covers the latter in a closed position and opens up same in an open position, and wherein the rail vehicle comprises a sensing unit (5) for sensing the position of the flap (4), and an actuating device (3), which actuating device (3) is coupled to the sensing unit (5) and is arranged on the waste water connection (2) in such a manner that, in a first position, the actuating device (3) permits complete coupling of a land-side connection piece (8) to the waste water connection (2) or opening of a shut-off member (6) of the waste water connection (2) only when the flap (4) is completely closed.
