Abstract (en)

[origin: WO2017025157A1] The present invention relates to a device for filling a can with a sliver produced in a spinning preparation installation, e.g. a drawing frame, carding machine or combing machine. The device is suitable to receive an empty and a full can at the same time, and comprises a depositing head (13) with an integrated rotary plate (14). According to the invention, said depositing head (13) is movably mounted such that it can be moved from a first position above a first can to a second position above a second can.
