Abstract (en)

The present invention concerns a tool (10) for mounting on both a panel of a swing door (2) and a static post (3) an operator (1) for motorizing the opening and closing of the door panel by rotation about a door rotation axis, Zd, said tool comprising: (a) An elongated post element (10p) comprising a post through hole (11p) located adjacent to a post end of the post element; (b) An elongated panel element (10d) w comprising a panel through hole located adjacent to a panel end of the panel element, wherein (c) The panel element and post element are telescopically coupled to one another, so that the panel element and post element can translate with respect to one another, and (d) Optionally a blocking device (13h, 13n, 13p, 13s) for blocking the translation of the panel element and post element with respect to one another at a position corresponding to a preferred distance, thus setting at a desired value the distance between the post through hole and the panel through hole.
