Abstract (en)  
[origin: EP3333358A1] A subsea template manifold and method, of which the subsea template manifold includes a first suction compartment configured to be at least partially embedded in a sea floor, a second suction compartment configured to be at least partially embedded in the sea floor, and a bridging element extending between and connected to the first and second suction compartments. The bridging element is configured to be at least partially embedded in the sea floor.
