Abstract (en)
[origin: WO2017029686A1] Building system for realizing buildings comprising a plurality of blocks (1) for realizing supporting partitions (40), each block (1) comprising therein two chambers separated with respect to each other, each one of said chambers being accessible by means of a respective upper opening (10, 11) and a respective lower opening and being configured to communicate, once said block (1) is installed, with respective chambers of the superimposed and underlying blocks (1), so that said chambers provide a first volume usable as formwork for a concrete pillar and a second volume useful for filling with inert material of suitable particle size.
