Abstract (en)

[origin: WO2018077422A1] An apparatus (100) for processing of a substrate (10) used in the manufacture of a solar cell is provided. The apparatus (100) includes an inspection assembly (110) configured to detect a first dimension of a first line pattern (13) on a first substrate, a processing device (120) configured to provide a second line pattern (14) over the first line pattern (13) to form a combined line pattern (12), wherein the inspection assembly (110) is further configured to detect a second dimension of the combined line pattern (12), and an alignment device (130) configured to align at least one of the processing device (120) and a second substrate based on the first dimension and the second dimension.
