Abstract (en)
[origin: WO2017025674A1] The invention relates to a surface wave antenna system, comprising at least one antenna (22) electrically shorted in the vertical plane, having vertical or elliptical polarisation and being suitable for emitting/receiving radiation in at least one frequency band centred on a central frequency f_0 associated with a central wavelength λ_0 , said antenna (22) being connected to a conducting medium (28) having a substantially horizontal surface, the antenna system being characterised in that it further comprises at least one wired cover (30) of length greater than or equal to $0.8 \lambda_0$, electrically connected to at least one antenna (22) at the centre of the cover (30), and suitable for radiating at least at the central frequency f_0 of the antenna (22).
