Abstract (en)
[origin: EP3335587A1] The present invention disclosed herein relates to a compact case, and more particularly, to a compact case in which a sealing member opening/closing an upper end of a contents storage part is coupled with screws to a contents storage part, such that an open upper end of the contents storage part can be sealed by the screw combination of the contents storage part and the sealing member when a lower case is rotated, and thereby, it is possible not only to improve the internal airtightness of the contents storage portion but also to prevent leakage of contents during the decompression process.
