Abstract (en)

A group of elements (2) for joining the plinths (4, 4') of a piece of furniture (80) or the like, characterized in that it comprises: - a first element (6) comprising a plate (10), which is provided on one face with connection means (12) to a foot (14) of said piece of furniture and on the other face with means (18) for the sliding coupling along said first plinth (4), - a second element (8) comprising a section bar with at least two "L"-shaped portions (30, 32), wherein the longitudinal edge (34) of a first portion (30) is folded so as to be substantially parallel to the second portion (32), the ends of said plinths (4, 4') to be joined being intended to abut frontally with said first and said second portion of said second element (8), respectively and in that said first element (6) comprises first means (22) which are intended to cooperate with corresponding second means (24) obtained in said second element (8) in order to contrast the relative sliding, along said first plinth (4), between said first element (6) and said second element (8).
