Abstract (en)

[origin: CN108611834A] The invention relates to a steam ironing appliance. The appliance comprises the following components: a steam generating base (100) and an iron (1) interconnected by a steam transport duct (101); the iron (1) comprises an ironing surface provided with at least one steam outlet hole (20) and a first electrical resistance (31) for heating the ironing surface, and the first electrical resistor is associated with a first regulating member; the iron also comprises a second electrical resistor (41) for heating a vaporization chamber (43), steam from the conduit (101) is sent into which before being diffused through the vapor outlet hole. The product is characterized in that the first resistor and the second electric resistor (41) are arranged in a heating soleplate (3) and the vaporization chamber (43) is at least partially arranged in the heating soleplate (3).
