Abstract (en)
[origin: WO2018114230A1] The invention relates to a rotary drilling tool and to a method for creating a borehole in the ground, comprising a main body, a removal apparatus, which has at least one hammer unit, which comprises an axially reversingly driven hammer element, and a lead-away line for leading away removed ground material and drilling suspension. According to the invention, a pumping apparatus is arranged on the main body along the lead-away line and the pumping apparatus is designed for pumping away the removed ground material with drilling suspension through the lead-away line.
