Abstract (en)

[origin: EP3336432A1] A nozzle (100) includes a nozzle body (102) with an inner air passage (104) fed by a first radial swirler (106) and a second radial swirler (108) axially downstream of the first radial swirler (106). A first fuel circuit (110) is axially between the first (106) and second (108) radial swirlers. A second fuel circuit (112) is axially downstream of the second radial swirler (108), wherein each of the first fuel circuit (110) and the second fuel circuit (112) extends from a respective fuel circuit inlet (114, 116) to a respective annular fuel circuit outlet (118, 120). An outer air passage (122) is defined between a fuel circuit outer wall (124) of the second fuel circuit (112) and an outer air passage wall (126), wherein the outer air passage (122) is a converging non-swirling air passage. An intermediate air passage (140) can be defined between an intermediate wall (138) and the second radial swirler (108), wherein the intermediate air passage (140) is a converging non-swirling air passage.
