Abstract (en)

[origin: EP3336433A2] A nozzle (100) includes a nozzle body (102) defining a longitudinal axis (A) and including a primary distributor (104) and a secondary distributor (108). The primary distributor (104) has an inner air passage (108) fed by a radial swirler (110); a first fuel circuit (112) radially outboard from the inner air passage (108) with respect to the longitudinal axis (A); a second fuel circuit (114) radially outboard from the first fuel circuit (112) with respect to the longitudinal axis (A), wherein each of the first fuel circuit (112) and the second fuel circuit (114) extends from a respective fuel circuit inlet (116, 118) to a respective annular fuel circuit outlet (120, 122); and an outer air passage (120) defined between a fuel circuit outer wall (126) and an outer air passage wall (128), wherein the outer air passage (120) is a converging non-swirling outer air passage (120). The secondary distributor (108) similar to the primary distributor (104) is downstream of the primary distributor (104) with respect to the longitudinal axis (A).
