Abstract (en)
[origin: WO2017028982A1] The invention relates to a bottle (cell) carrier for cleaning machines, comprising an elongated carrier profile having a carrier part (12) comprising two side limbs (14, 16) which are connected at their lower end and extend upward and form lower side wall parts of the carrier profile, and an upper part (20) which extends between the upper edges of the side limbs and which has a horizontal central section (22) having receiving openings (24) extending downward on both sides of the central section, which form upper side wall parts and, in the area of an oblique side edge (30), adjoin the lower side wall parts (14, 16), wherein the lateral sections (26, 28) of the upper part extend at an oblique angle relative to the horizontal central section (22), and the lower side wall parts (14, 16) have apertures (36).
