Abstract (en)

[origin: WO2017029065A1] The invention relates to a frame unit for a two-wheeled vehicle, comprising a main frame (2, 2', 2''). The problem addressed by the invention is that of avoiding the disadvantages from the prior art and nevertheless achieving a frame unit having a high degree of design freedom. This problem is solved in that the main frame (2, 2', 2'') is formed by a first partial shell (16a, 16a', 16a'') and a second partial shell (16b, 16b', 16b'') joined to the first partial shell (16a, 16a', 16a''), and that the first partial shell (16a, 16a', 16a'') and the second partial shell (16b, 16b', 16b'') are produced of a material comprising steel. The invention further relates to a method for producing a frame unit and a use of a frame unit.
