Abstract (en)

[origin: WO2017029135A1] The present invention relates to a combination appliance that comprises a cooktop (10) having at least one cover plate (103) and at least one heating element (101) and a steam extraction device (11) that is arranged underneath the cooktop (10) and has at least one fan (110) for suctioning air from the space above the cooktop (10). The combination appliance (1) is characterized in that at least one opening (104) is provided in the cooktop (10) and is situated in the edge region of the cover plate (103) of the cooktop (10), and in that the at least one opening (104) is the suction opening for suctioning air into the combination appliance (1).
