Abstract (en)

[origin: WO2017029134A1] The present invention relates to a combination device that comprises a cooktop (10) having at least one opening (104) and a steam extraction device (11) arranged below the cooktop (10) for suctioning air from the space above the cooktop (10) via the at least one opening (104), which is the suction opening of the combination appliance (1). The combination appliance is characterized in that the steam extraction device (11) has a single fan (110) that has an air inlet opening (115) and is arranged in the combination appliance (1) in such a way that the air inlet opening (115) of the fan (110) faces the cooktop (10).
