Abstract (en)

[origin: CN108204570A] The invention relates to a primary optical assembly (10) in a motor vehicle lighting device (1). The primary optical assembly comprises a plurality of elongate primary optical elements (12) arranged side by side and/or one above the other, wherein each of the elongate primary optical elements (12) has a near end (13), a far end (15) and a cross section which is gradually increased from the near end to the far end. It is proposed that the primary optical elements (12) are produced from a dimensionally stable, but elastically deformable, transparent materials and are positioned and fastened to a light source (100) or a light source carrier (104) of the lighting device (1) by means of a holder (20), wherein the holder (20) is provided with holding elements (22) for highly accurate positioning of the primary optical elements (12) in the region of the far ends (13).
